

Problem Statement 1

Privileged Access Misuse & Insider Threat Detection

Insider threats - from employees, contractors, vendors, and admins - acting maliciously, negligently, or under compromise pose serious risk to banking security and data integrity.

Expected Outcome:

- Detects misuse of privileged accounts
- Identifies insider threats in real time
- Uses AI-driven behavioural analysis
- Enables risk-based access control
- Protects critical administrative systems
- Incorporates Quantum-Proof Cryptography (QPC) to secure sensitive artefacts and credentials

Focus Areas

- Insider Threat Detection

- Behaviour Analytics

- Privileged Access Management

- Risk-Based Authentication

- Protects critical administrative systems

- Quantum-Safe Security
